NES Ltd., Town of Shumen, Bulgaria

NES Ltd.

The Company

NES Ltd. is a manufacturer of appliances utilizing alternative energy sources.

The company was established in 2002 in town of Shumen, Bulgaria.

The company has its own manufacturing, warehousing and administrative facilities with an area of 30 000 sq. meters.

The staff amounts to 360 highly qualified specialists.

NES Ltd., Town of Sofia, Bulgaria

All company activities are governed by QMS ISO 9001:2008.

The production is marketed across Europe, Africa, North America, part of Asia and other marketplaces are in the scope of near-future activities.

Most products of NES Ltd. are designed to utilize alternative energy sources like solar thermal energy, biomass energy and aerothermal energy. These products contribute to sparing the energy reserves of the planet and minimizing the carbon emissions.

Our trademarks

Water heaters for domestic hot water BB Q/S1 EXT series

Floor standing

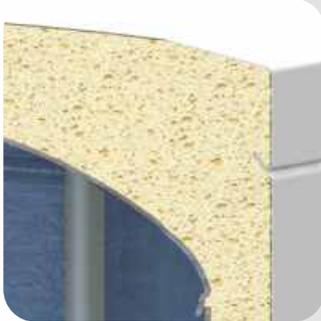

With one coil, horizontal models

p. 30

Titanium Enamel

Hot water is aggressive to steel. In order to protect a water heater from corrosion it needs to be isolated from the hot water in it. All SUNSYSTEM water heaters are tightly covered with titanium enamel on the inside. It is then baked to produce a smooth and uniform deposition-free glazing. Thus the domestic hot water remains clean, and the water tank is protected against corrosion.

Insulation

The quality of the insulation of a water heater is a key factor for its heat conservation capability and energy efficiency. All SUNSYSTEM water heaters are furnished with rigid Polyurethane (PU). Polyurethane boasts extremely low thermal conductivity owing to its closed cell structure. In the same time it is harmless to nature as it contains environment friendly foaming agent. Polyurethane helps conserve heat for a long time and minimize energy consumption.

Materials

All SUNSYSTEM appliances are produced from select materials of ultimate grades to provide for best product performance and longevity. We source our materials and components from qualified suppliers, with verified quality by reputable certification institutions.

Renewable Energy Enabled

SUNSYSTEM water heaters with heat exchangers (with one coil, with two coils or with coil and water mantle) are renewable energy enabled. They employ both indirect and direct heating and may be used with heat derived from renewable energy sources. Go for renewable energy to cut down on your monthly costs and do your part to help reduce carbon dioxide emissions.

Cathodic Protection

Wall-hung water heaters SUNSYSTEM are equipped with two magnesium anodes. The sacrificial anode protectors provide secondary protection against corrosion of the water tank in all carbon-steel models.

The anode protector acts against corrosion in three different ways simultaneously:

- Decreases the electric potential by means of electro-galvanic polarization.
- Creates a protective film on the metal surface and thus protects it from contact with the water.

Electric heating kit (electric heating element and thermostat)

All wall-hung water heaters SUNSYSTEM, whether intended for direct heating or indirect, come in set with electric heater of 1.5 kW, 2 kW or 3kW.

The heater's operation is controlled by thermoregulator with independent thermal protection function.

The thermostat may be adjusted by the user within the range 30°C ÷ 80°C, and the thermal protection would go off in case the water reaches 95°C.

Inspection opening

Convenient inspection opening located in the water tank bottom gives access for maintenance and cleaning.

The opening is hermetically closed by special cover.

To the cover of inspection opening are mounted electric heating element, thermostat and anode.

Heat Exchangers

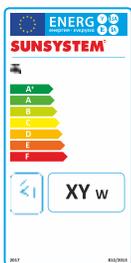

All models with indication S1, S2 and S1 M are equipped with heat exchangers (with one coil, with two coils or with coil and water mantle).

That enable the appliance to utilize heat from external sources of energy such as solar collector or biomass boiler.

Bathroom water heaters.
 Easy to install and use. Compact size.
 Vertical and horizontal models.
 Suitable to produce domestic hot water (DHW).
 In models with an electric heater, the water is heated directly.
 While in models with a built-in heat exchanger and an electric heater, the water is heated by using electrical energy and / or an external source of heat (solar system or heating system).

Energy Efficiency.
 Directive 2010/30/EU,
 Regulation 812/2013:

Capacity, Liters

50 - 120

Class

C

Insulation	High efficiency insulation (DIN 4753-8): rigid PU, thickness 20 mm. External metal casing in white RAL 9003.
Water tank	Water tank of low-carbon steel S235JR. Complex corrosion protection realized by means of titanium enamel (DIN 4753-3) and two magnesium anodes (DIN 4753-6). Thermometer. Convenient inspection opening on the bottom of water tank. Control panel: external thermostat control, light indicator. Electric heating element: 1.5kW, 2kW, 3kW. Operating pressure: 8 bar Test pressure: 13 bar Maximum temperature: 95°C
Inlets / Outlets	All threads are external. Available models with Left-side inlets/outlets or right-side inlets/outlets for convenient connection.
Heat-exchanger: coil (models MB NL S1)	Enables the tank to utilize an external source of heat. Operating pressure: 16 bar Test pressure: 25 bar Maximum temperature: 110°C

Safety devices	Safety valve, 8 bar. Thermostat with dual thermal electric protection.

1. External casing in white
2. High efficiency thermal insulation of environment-friendly rigid PU, thickness of 32 mm
3. Water tank of low-carbon steel
4. Titanium enamel (DIN 4753-3)
5. Two anodes (DIN 4753-6)
6. Stainless tube for hot water
7. Electric heating element
8. Control panel
9. Thermometer
10. Thermostat. Dual thermal electric protection
11. Safety valve, 8 bar
12. Lower Coil heat exchanger S1
13. Upper Coil heat exchanger S2

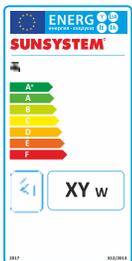

Connection diagram (sample)

It is recommended that sizing and connection of your system be carried out by an authorized service professional/specialized service shop.

Bathroom water heaters with easy operation and compact size.
 Vertical installation.
 Suitable for domestic hot water production.
 The models have two parallel heat exchangers coils for direct water heating.
 Possibility to connect to the solar and heating system.

Energy Efficiency.
 Directive 2010/30/EU,
 Regulation 812/2013:

Capacity, Liters

150 - 200

Class

C

Insulation	High efficiency insulation (DIN 4753-8): rigid PU, thickness 32 mm. External metal casing in white RAL 9003.
Water tank	Water tank of low-carbon steel S235JR. Complex corrosion protection realized by means of titanium enamel (DIN 4753-3) and two magnesium anodes (DIN 4753-6). Thermometer. Convenient inspection opening on the bottom of water tank. Control panel: external thermostat control, light indicator. Electric heating element: 2kW, 3kW. Operating pressure: 8 bar Test pressure: 13 bar Maximum temperature: 95°C
Inlets / Outlets	All threads are external. Available models with Left-side inlets/outlets or right-side inlets/outlets for convenient connection.
Heat-exchanger: two parallel coils	Enables the tank to utilize an external source of heat. Operating pressure: 16 bar Test pressure: 25 bar Maximum temperature: 110°C

Safety devices	Safety valve, 8 bar. Thermostat with dual thermal electric protection.

- S1o, mm** Coil outlet
- P1/P2** Anode
- E, mm** Installation of an electric heater

Compact and efficient water heater with one heat exchanger coil.
 Suitable to produce domestic hot water (DHW).
 Designed for connection to a diesel boiler or gas boiler.
 Diesel boiler (or gas boiler) can be placed on top of the water heater.
 This is a space-saving solution for small installation room.

Energy Efficiency.
 Directive 2010/30/EU,
 Regulation 812/2013:

Capacity, Liters

120 - 200

Class

C

Insulation	High efficiency insulation (DIN 4753-8): rigid PU, thickness 50 mm. External metal casing in white RAL 9006.
Water tank	Water tank of low-carbon steel S235JR. Complex corrosion protection realized by means of titanium enamel (DIN 4753-3) and magnesium anode (DIN 4753-6). Thermometer. Two sensors monitor the temperature in the water heater and the boiler. Convenient inspection opening 180x110. Adjustable feet. Operating pressure: 10 bar Maximum temperature: 95°C
Inlets/ Outlets	All threads are external.
Heat-exchanger: coil	The heat exchange coil is connected to the boiler. Operating pressure: 16 bar Operating pressure: 110°C

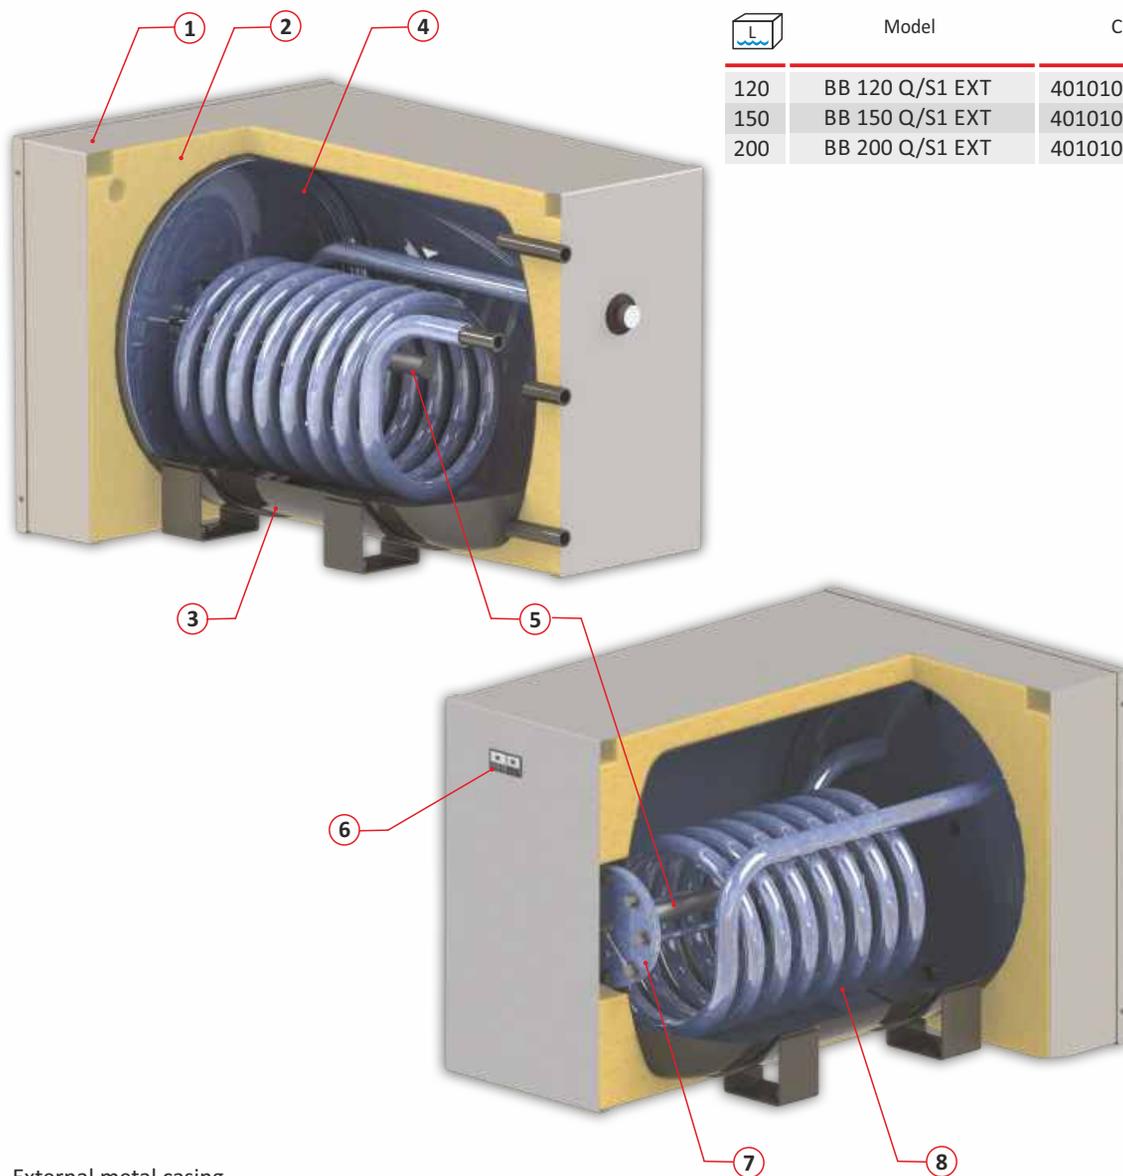

Safety devices	Safety valve, 8 bar.

with one coil**

Horizontal models

	Model	Code
120	BB 120 Q/S1 EXT	4010102102114
150	BB 150 Q/S1 EXT	4010102102118
200	BB 200 Q/S1 EXT	4010102102122

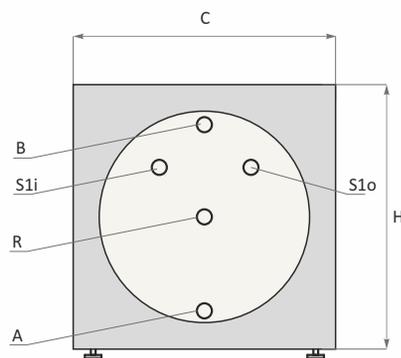

1. External metal casing
2. High efficiency thermal insulation of environment-friendly rigid PU, thickness of 50 mm
3. Water tank of low-carbon steel
4. Titanium enamel (DIN 4753-3)
5. Anode (DIN 4753-6)
6. Thermometer
7. Inspection opening, flange
8. Heat exchanger coil

Heat exchanger coil. Parameters.

- S1** Heat exchanger coil.
- S1, m²** Heat exchange surface
- S1, L** Coil capacity
- S1, L/h (kW)** Prolonged power acc. to DIN 4708; 10°C/80°C/45°C
- S1, NL 60°C** NL- power coefficient at 60°C
- S1, Δp mbar** Pressure drop Δp

General parameters

- L** Capacity
- H, mm** Height
- D, mm** Length
- C, mm** Diameter
- kg** Weight

Inlets / Outlets

- A** Cold water inlet
- B** Hot water outlet
- P1** Anode
- R** Recirculation
- S1i** Coil inlet
- S1o,** Coil outlet
- T** Thermometer
- Z1** Sensor for thermometer
- Z2** Sensor for boiler
